**Portfolio:** https://www.baptistegrimaldi.com

## SUMMARY

Full-stack software engineer with solid experience in cloud infrastructure, networking, DevOps, and cybersecurity. I enjoy building scalable systems and cross-platform tools that solve real problems. Comfortable working across the stack and learning new technologies quickly. Fluent in English, German, and French, and used to working in multicultural teams. I care about automation, open source, and making systems reliable and easy to maintain.

## KEY SKILLS

**Domains:** Service Deployment, DevOps, CI/CD Workflows, Linux/Windows/macOS, Containers, Fullstack Development, Design UX/UI, Organisational/Management Skills
**Languages:** Golang, JavaScript/TypeScript, PHP, Python, Bash, SQL, Rust, Lua, C#, Java
**Frameworks:** Express.js, Laravel, Vue.js, React, Next.js, Svelte, Tailwind, CodeIgniter
**Databases:** MySQL, PostgreSQL, SQLite, MongoDB
**DevOps:** Git, Docker, Kubernetes, Terraform, Ansible, GitHub Actions
**Cyber-Security:**

## WORK EXPERIENCE

**Fullstack Software Engineer, Oxianet** — **Oct 2022 - Present**

- Project management – definition of needs and task distribution within the team
- Fullstack PHP development and technical lead on Immozia (real estate aggregator)
  - Immozia is a finished product that is used to find real-estates in France.
- WEB reverse engineering and internal tools optimization
- Object-Oriented Programming (POO), MySQL (database design and management), PHP, JavaScript, HTML, CSS

**IT department intern, HARA consultings** — **June 2021 - July 2022**

- Definition and continuous improvement of network architecture
- Maintenance of IT equipment
- Development of IT management and monitoring tools

**Fullstack JavaScript development missions, Self-Employed** — **June 2021 - Nov 2023**

- Medical intranet
  - Used to collect and manage laboratory samples
- Trading tool interface
  - A multi-coin trading software to put and switch between cryptocurrencies on the market depending on predefined rules.

**IT Park Manager, ADIS** — **April 2021 - July 2021**

- Installation, configuration, and maintenance of computer workstations and peripherals
- Technical support and troubleshooting for hardware and software issues
- Inventory management, equipment lifecycle tracking, and maintenance planning
- Coordination with IT teams to ensure system reliability and user productivity

**GrimCorp, Self-Employed** — **March 2019 - March 2020**

- Electronic repairs on smartphones and computers
- Operating system maintenance
- Workflow setup on Windows and MacOs

## EDUCATION

**Master Computer Science, Epitech** **2026**

**Main Courses**: Cloud Services, Software Engineering, Algorithms, Cybersecurity, Math

- **Trinity**: Warehouse management + mobile checkout (Golang, Svelte, MongoDB, Flutter, paypal api). 80% test coverage, CI/CD, reduced order time by 40%.
- **Time Manager:** Employee clocking system (Elixir, Vue.js, MySQL). Cut HR management time by 30%.
- **CIA project**: Pentest + reorganisation of services project (Docker Swarm, Traefik, TLS, custom DNS update script).
- Closed critical vulnerabilities, added automated CI security checks.
- **Terra Cloud**: Multi-region Azure infrastructure (Terragrunt, Ansible). Reduced provisioning time, improved resilience.
- **TavelRoot** (Hackathon): IoT CTF platform in 35h (Go + React Native + Raspberry Pi). Won 1st place and delivered a working prototype used by multiple teams.

**Application development Bachelor, CESI** **2023**

- **Relation RE-Sources**: Social network for educational resources and interactions (React, CodeIgniter, PostgreSQL). Used by 100+ users.
- **AstroDroid**: Space data app (NASA/OpenAI APIs, Drupal). 1,000+ visits in first month.
- **Thesis Subject**: Immozia, a French real-estate web app. Search, notifications, LLM (AI) analysis on real-estates. Used by many professionals to save time during research and have more insights on the real-estate market fluctuation.

**Information systems for Organisations - IRIS** **2022**

- Asian **Recipes Community Blog**
- Physical **server rooms** setup and optimisations.
- Enterprise grade Home-lab for testing (pfsense, redundant linux servers, traefik, VPN, Pentests)
- **Portfolio website**

**French-German High School Diploma - Bartholdi Colmar** **2020**

- **Teaching of coding introductions** with minecraft mods
- Founded the **GENII Coding group** in the school

## INDEPENDENT PROJECTS

- **Built and optimized custom Arch Linux** and Neovim configs for productivity.
- Designed and built multiple custom **mechanical keyboards** with optimized layout.
- POC **keyboard firmware in rust** with flasher
- **Self-hosted Server Bay** with NAS, servers, pfsense, VPN, Plex, home automation, custom DNS.
- **Contributed to open-source** projects like Dokploy (custom Traefik middleware), Avante Nvim, Moonlight client and made Custom plugins for Neovim.
- Lots of **hackathons** (IRL/online) and security challenge on platform like Rootme and hackthebox
- **3D printer Deep Moding**, Hardware and firmware
- **ShroomHub**: A Fully automated controlled environment to grow lions-mane mushrooms
- A **Yolov10 trained, fine-tuned and optimized** on full CPU computation to recognize only one of my cats for food automation.
